

PMG Digital Business Platform Connectors

Connectors are purpose built collections of drag & drop integration actions that will ultimately perform work, provision, and/or move data to/from a target system over a fully supported vendor and product-specific API. Connectors are plug-ins to the iDeliver BPMS component of PMG Digital Business Platform. There are over 40 available Connectors and the list grows with each release. Common connector examples include Active Directory (for provisioning AD objects like creating a user account) and various ITSM tool connectors such as Service-now and BMC Remedy (for creating incidents, problems, and changes). Connectors generally provide two-way integration into ERP, HR, CRM, ITSM, as well as IT and cloud provisioning/automation tools. A sampling of available connectors is listed below.

INFRASTRUCTURE

- Amazon EC2
- Chef
- F5 BIG-IP
- HP Cloud Service Automation
- HP Operations Orchestration
- Microsoft Azure
- Microsoft Hyper-V
- Microsoft SCCM
- OpenStack
- Vistara
- VMWare vCenter
- VMWare vCloud Automation
