

PMG Platform Connectors

PMG Connectors are purpose-built collections of configurable workflow actions designed to move data between the PMG platform and a target system over a published API. Connectors facilitate integrations by providing a drag-and-drop interface to perform work and/or exchange data that allows non-developers to connect systems and applications within a business process. Remaining upgrade safe is another advantage over scripted integrations, which PMG is able to support by leveraging vendor- and product-specific APIs for each Connector.

PMG offers over 50 Connectors to the PMG platform, and the list continues to grow.

INFRASTRUCTURE

- Amazon EC2
- F5 BIG-IP
- HP Cloud Service Automation
- HP Operations Orchestration
- Microsoft Azure
- Microsoft SCCM

ABOUT PMG

PMG offers a low- and no-code software platform that empowers businesses to quickly build applications and automation solutions using drag-and-drop designers. Through PMG's workflow orchestration, automated tasks are connected to human activities for end-to-end business process automation. The PMG Platform also provides easily configurable portals and dashboards, as well as rich forms and API integration capabilities.
